

Important New Product Info from CoreTex Products, Inc.

New Insect Repellent Formulation

In cooperation with the leading manufacturer of DEET Insect Repellents in the U.S., we are pleased to announce we have received the first EPA approval for use of this proprietary polymer matrix formulation technology. This is a major advance in the use of DEET Insect Repellents.

This newly approved EPA formula allows the DEET to be released in a more controlled and measured manner, permitting longer lasting performance once obtained only by high concentrations of DEET.

**Towelettes,
Lotion Bottles,
& Pump Spray Bottles.**

The research and development of this product was undertaken following the CDC's request to minimize the percentage of DEET whenever possible. Canada has already established the upper limit at 30% as well as several States that are considering the same limitation. This product meets that requirement

In the past, lower percentages of DEET have been shown to be just as effective as higher percentage products but lacked in time of effective duration.

This new 30% DEET formula now lasts for more than 7 hours of maximum effective protection with just one application. As an added bonus it has been formulated to be resistant to sweat and water wash off, yet washes off easily with soap and water.

Two other major improvements also incorporated into this product are its very low odor and being non-greasy, which were strong objections to previous formulations.

CoreTex Products, Inc. is pleased to offer to their customers an improved, extended-protection product while reducing the amount of DEET as suggested by the CDC.

Key points of new BugX 30 Towelette, Lotion & Spray formulations:

- Just as effective as higher percentage DEET products and now provides over 7 hours of complete protection.
- Proprietary polymer matrix formulation allows DEET to be released in a more controlled and measured manner providing longer lasting performance once available only by using high DEET concentrations.
- Repels Mosquitoes that can carry West Nile Virus and Ticks which may carry Lyme Disease.
- Over 7 hours of complete protection from mosquito bites with just one application.
- Effective protection from mosquitoes, gnats, no-see-ums, sand flies, biting flies, deer flies, stable flies, black flies, ticks, chiggers, red bugs and fleas.
- New-technology 30% DEET product in a water-based formula.
- Non-greasy and Non-staining.
- Has very low odor.
- Resists perspiration and water wash off. (Easily removed with soap and water.)
- Feels great on the skin but is tough on bugs!
